Auto tune evo for mac

Auto-Tune Evo v6.10 View Auto-Tune Evo v6.10 Screenshot Auto-Tune Evo (formerly Auto-Tune) is a multi-platform plug-in that corrects intonation problems in vocals or solo instruments, in real time, without distortion or artifacts, while preserving all of the expressive nuance of the original performance with audio quality so pristine that the only difference between what goes in and what comes out is the intonation. Over a typical pitch correction range, it is simply not possible to tell that a sound has been processed, except that it is perfectly in tune. Automatic Mode Most common pitch problems can be corrected by Auto-Tune 4's Automatic Mode. Automatic Mode instantaneously detects the pitch of the input, identifies the closest pitch in a user-specified scale (including minor, major, chromatic and 26 historical and microtonal scales), and corrects the input pitch to match the scale pitch. A Retune Speed control lets you match the retune rate to virtually any performance style. Graphical Mode For meticulous tweaking, the Graphical Mode displays the performance's detected pitch envelope and allows you to draw in the desired pitch using a variety of graphics tools. This mode gives complete control over the correction or modification of the most elaborate expressive gestures. Related Music Production Equipment: Check out our roundup of USB Audio Interfaces Image not available forColor: To view this video download Flash Player xSorry to interruptCSS Error Auto-Tune Mobile brings vocal pitch correction to vocal performance, using Antares' world-class Auto-Tune® technology. Now Antares' professional pitch correction recording studio technology is available for local performers to use live, on stage, or in recording apps on your iPhone / iPad.The Auto-Tune Mobile app does not do anything until you sing through it. When you sing, Auto-Tune Mobile detects what note you are singing, and corrects the pitch of your notes, to the nearest valid note, from the ones you select on the screen. The corrected vocals go out through the speakers (when you turn on Audio Out); also Auto-Tune Mobile is compatible with other apps if you wish to record.Connect Auto-Tune Mobile to your sound system between your microphone and your P.A. / speakers to use Auto-Tune Mobile in a live performance setting. Use a microphone audio interface device to connect the 1/8 inch jack to your microphone line and the headphone output to your sound system. Turn on Audio Out on the Auto-Tune Mobile app to get audio to pass through the system. If you turn on Audio Out without connecting to your sound system, you are likely to hear the internal feedback of the internal speaker to the internal mic. Adjust your mic and speakers so there is no feedback.Vocals are corrected to the nearest pitch based on the key and scale of the song, or to a set of melody notes selected on the screen. Use the Chromatic scale when you don't know what key or scale a song is in. This is the easiest way to correct your voice to the nearest pitch.The Retune speed is the time it takes for Auto-Tune to pitch correct your voice. The Normal Retune speed is a setting of 50 msecs -- this gives a natural humanized pitch correction effect. Normal Retune speed is appropriate for a moderate tempo song, for example a song at 120 bpm with a melody in eighth notes. A funky or fast tempo tune, or a song requiring sixteenth note precision, will likely require a Fast Retune speed. The Fast Retune speed corrects notes within 25 msecs; this is better for faster notes. For slow songs or ballads featuring long held notes, the Slow Retune speed (75 msecs) may provide a more natural sound.In addition to natural sounding pitch correction, you can also apply the iconic Auto-Tune effect. The Auto-Tune effect in essence retunes your pitch immediately (in 0 msecs). Ironically, if you sing really well, there is not much correction for Auto-Tune to do. The Auto-Tune effect is most noticeable when you are off key or you slide into a note. Also when you set the app to the Auto-Tune Effect setting, a meter appears at the top (red bouncing ball) that visually indicates whether you are singing sharp or flat. The Bypass button is provided as a quick way to stop and start adding the effect as you sing.Auto-Tune Mobile conforms to the Inter-App Audio (IAA) standard so you can use Auto-Tune with your other IAA apps. Notice when using with GarageBand that the Auto-Tune filter takes effect as you record the track. If you want to pitch correct a pre-existing vocal you will need to replay it outside of GarageBand and re-record it to a new track. Midi control of pitch correction is included, so you can connect a Midi keyboard and direct the vocals to sing on a particular melody or on a set of scale notes as pressed on the keyboard. Midi note presses will show up in red on the app.Auto-Tune Mobile is Audiobus compatible, allowing Auto-Tune Mobile to work with your other iOS music apps. Auto-Tune Mobile acts as a filter in the "Effects" category, so you can apply pitch correction and the Auto-Tune effect to other Audiobus-compatible apps. (see).* Vocal real-time pitch correction designed for live performance* Compatible with other IAA and Audiobus apps* Built with Antares Audio Technologies' Auto-Tune® professional pitch correction* Tested with Tascam iXZ and IK Multimedia's iRig microphone audio interfaces.* Made for musicians. This release saves and restores the last button settings when using the Audio Units (auv3) version of Auto-Tune Mobile. December 2019How can you improve the application so much in a single month, right?this is true?Yes, ask GodDear Seoj Rew Hola lo he comprado para mi iPhone 12 Pro Max y no tengo ni idea de cómo funciona, no se donde guarda las grabaciones ni como se hacen las mismas y como se utiliza en general. Muchas gracias Os quejais sin saber nada, antes de hablar informaros un poco y ver para que vale realmente esta aplicación, obviamente que no te la vas a descargar y te vas a poner a cantar en la misma aplicación, autotune nunca a consistido en eso, esta aplicación funciona con GarageBand y os aseguro que funciona de maravilla, muchísimo mejor que el autotune nativo de garageband, 10 de 10 y los que hablais sin saber diciendo que la app es basura informaros un poquito antes de hablar, una inversión de 10 ahora sueño como Duki hermano El desarrollador, Antares Audio Technologies, LLC, no ha proporcionado a Apple detalles sobre las prácticas de privacidad y la gestión de datos.
